NUCLEAR PHYSICIST COMES OUT OF KANYAMA

By Alfred Kalembo

You may recall my article not long ago entitled, "Can a Nuclear Physicist Come out of Kanyama?"

I am happy today to report that Ephraim Chiyowela, a resident of Kanyama and a beneficiary of Leadership Institute of Zambia's Educating Future Leaders (EFL) university sponsorship project, has recently qualified as a Nuclear Physicist.

Ephraim was the youth leader at NextGEN Worship in Kanyama. In 2021, he graduated from the Copperbelt University where he had been studying Pure and Applied Physics. In 2023, Ephraim was selected on merit and sponsored by the government - through the Higher Education Loans and Scholarship Board (HELSB) - to pursue a Master's degree in Nuclear Physics and Technologies in Moscow, Russia.

On Wednesday this week I received this message from Ephraim: "Good morning, Bishop Kalembo. Today I successfully defended my research work. I'm now a qualified Nuclear Physicist. Thanks for supporting and continuing believing in me in order to do my best. I am scheduled to return home on 30th July, 2026."

With the support of our cooperating partners, LIZA is pleased to contribute to manpower development for Zambia. With support and encouragement, indeed a Nuclear Physicist has come out of Kanyama.

I wonder how many other bright young people are out there in rural areas and low income residential townships who have no one to help them realise their potential the way Ephraim was helped.

Thank you.

Alfred Kalembo
